

Surface Mount Back Box

Description

The new Surface Mount Box or the Back Box introduced by us has been designed to fit the entire range of Information Outlets, be it Cat 5e, Cat 6, Single, Dual and Quad. As against the standard surface mount box wherein there is either one or two cable entry points, this SMB has cable entry points on all four sides and in addition one in the centre. This greatly helps in easy routing of the cables as well as clean tension relief. Further overall dimensions have been adjusted in such a way that the SMB perfectly fits inside the standard UK type and US face plate. As a result this not only reduces overall size of the assembly, it gives an additional space inside for cable holding. The box is made up of internationally approved fire retardant ABS plastic material and is quite rigid. Inside stand-offs are provided with brass inserts. It is available in white colour and can match any wall decoration.

Physical and Mechanical Properties

86 X 86 mm X 52 mm deep - 2 module Box
 147 X 86 mm X 52 mm deep - 4 module Box
 High Quality ABS Plastic material
